AMPPS (And More PHP Scripting) is a web development kit that includes Apache, PHP, MySQL, Perl and Python. It can be easily installed and launched. Accessibility via the system tray area The installation procedure takes a while to set up all components and, once launched, AMPPS creates an icon in the taskbar notifications area for quick access. User-friendly interface with intuitive options The main configuration panel has a clear-cut structure that allows you to immediately dive into the customization settings. The Apache and MySQL servers are launched at startup automatically, and you can stop or restart their services, as well as modify their configuration file. View log data and customize PHP extensions Log files with information on access events are automatically created and they can be studied at any time, along with errors (if any). Plus, the default configuration can be restored to default. When it comes to PHP, you can customize extensions and change the PHP version. The MongoDB server can also be started and edited when it comes to the configuration file. If FileZilla is installed on the PC, this can be launched as well. What's more, multiple MySQL and SQLite databases can be created and administered via phpMyAdmin and SQLite Manager. Evaluation and conclusion We have not come across any stability issues in our tests, since AMPPS did not hang, crash or pop up error messages. It had a good response time and consumed low CPU and RAM, so it didn't hog system resources. All in all, AMPPS features handy options and configuration settings for managing web servers, and it should meet the requirements of web developers looking for a straightforward software utility in this regard.
