A large number of applications are available for Windows 8, such as Office, Paint, and others. One of the most popular ones is the Mail app. Mail is a well-designed app that offers most of the basic features, such as creating, sending, and receiving emails. Despite its relatively simple interface, it has some powerful features that enable you to view and navigate emails that are in your mailbox in all your accounts. It is possible to move, delete, and reply to email messages right from the app. In fact, you can use it as a full-fledged email client. You can also use the app to access email accounts on Gmail, Yahoo, Hotmail, AOL, and other online services. It is also possible to view your incoming emails right from the app. There are several other features in the app that are useful to everyone. Favorites One of the first things that you will probably notice when you start using the Mail app is that there are two kind of "favorites" found in the app. In fact, there are several other types of favorite folders in the app as well, which we will be discussing in more detail. In order to create a new favorite folder, click the "Accounts" tab and then the "+" button to create a new folder. Simply choose the folder name and then click the "Add" button. This will make the folder appear in the list of your favorite folders. In the "Bulk" section, you can add multiple email addresses. Simply tap the "+" button to create a new email address. After you add all the addresses that you wish to include in the list, simply tap the "Add" button to add them to your list of favorites. You can now tap the "+" button in the "Inbox" section to add a new folder that will contain the emails that you have received in the last 24 hours. Once you have added all the emails that you wish to include in this list, you can

You might also be interested in this program: In order to share files with people using different versions of MS Word, you will need to convert the files to PDF first. The good news is that you can use a simple utility to do this right from your desktop. Creating and sharing PDFs with Total PDF converter Total PDF Converter is a program that enables you to create PDF files and share them with others using MS Word. This handy utility comes with all the basic features required to accomplish this task, including a basic conversion tool that enables you to batch process PDF files, an interface that you can use to add custom text and graphics, a preview facility and multiple user support. Basic PDF conversion tool The program supports the creation of various formats, including PDF, in addition to DOC, DOCX and Text files. Each file is converted in the background while you work, which means that it will remain in the source folder while you import a new one. Creating PDFs from your documents is simple and straightforward. All you need to do is select the "New" option from the File menu and then choose the appropriate type of file from the pull-down list. Then you can either click the "Create" button to begin conversion, or select the "Batch processing" option from the bottom right of the window. This will start the conversion process in the background while you continue to work in the main window, and you can have it complete its task in a matter of minutes. Preview feature for PDF files In addition to the conversion functionality, Total PDF Converter also includes a preview section that allows you to check the output file as it is being created. This useful feature can be enabled from the File menu. You can use this feature to check the status of the conversion process, select the output format or even choose to convert specific pages of the file. This means that you can set the document to preview before conversion, so you can make sure that it does not have any errors. Multiple user support You do not need to worry about sharing your documents with people that use different versions of MS Word as this program includes a multiple user support feature. In order to convert multiple documents at once, simply select them from the File menu and then select the "Batch processing" option from the bottom right of the window. You can also use the same process to add custom text and graphics to the converted files. Simply select the "Add"

What's New In?

Elgindy Document Converter is a fairly straightforward application that enables you to convert your DOC, DOCX and PDF files to either of the other two formats, and it is specially designed with batch processing in mind. However, the program still needs polish. Simple document converter that can handle multiple files at once In order to add the files you wish to process, it is necessary to select their containing directory. You can also specify whether subfolders should be considered, and then click the Search button to have the program import all the relevant files. Unfortunately, though, it is not possible to add individual files, and the application does not support drag and drop. Moreover, you cannot remove any of the loaded documents, so you have no choice but to process them all, even those that you may not need. Useful conversion tool that lacks some important functions Aside from the fact that you cannot filter the imported documents in any way, it is also not possible to change the output location, as the program exports the processed files to the source folder regardless of that is entered in the "Target" field. Additionally, the program does not offer any advanced features. For instance, you cannot modify the properties of the output files in any way, merge multiple documents or insert watermarks. Straightforward utility that offers a basic set of features In conclusion, Elgindy Document Converter is a reliable tool that enables you to convert files between the DOC, DOCX and PDF formats. Unfortunately, it lacks several important functions, but users who are looking for a no-nonsense conversion utility may wish to give it a try.
