A blocked sink drain is a huge problem for many homeowners. Often a sink drain is clogged with hair, skin, and soap scum. In addition to that, it may also have a design flaw that causes it to be blocked. Over time, sediment, soap scum, and hair builds up within the drain, which may eventually be the cause of a blockage. To prevent problems, the first thing to check when a sink drain is clogged is whether there is a design flaw in the sink. If the drain has a design problem, then you'll need to replace it, rather than attempt to clear or clean it. What kind of problem are you dealing with? Design Flaws A design flaw can lead to a sink that won't drain properly. A sink drain may not be made correctly, or it may be leaking. A design flaw can make the sink require constant cleaning, because soap scum, hair, and sediment may build up. The most common design flaw in sinks is called caulk bubbles. Often, this problem is the result of over-packing a drain. When a sink drain is over-packed, then it will actually trap water in the sink bowl and cause a ballooning effect. In fact, the drain may be so water-filled that it actually floats above the level of the sink itself. This design flaw is most common in older models of sinks and can cause many problems. The next most common design flaw is called drainage grooves. When sinks are built incorrectly, one result can be ridges that build up in the

drain. The sink must then be stripped every so often. Hair and soap scum will also build up in the drain, causing the buildup to be clogged. What to Do A sunken sink does not have to remain a problem. You can easily repair sunken sinks. To fix a clogged sink, purchase a new sump pump, replace the sump pump, or replace your existing sump pump. If you can't fix the problem yourself, hire a professional to do the
