Watch this again. The filmmakers seem to be drawing attention to themselves with all this deliberate political intertudes. I found the same thing to be a bit distracting in the other movie I saw at the festival: The Lonely Island's Popstar: Never Stop Never Stopping, another satire directed by Alex Core.(a) Field The subject matter disclosed generally relates to a system and a method for cold stratified combustion in which the combustion temperature is sufficiently low that carbon monoxide and nitrogen oxides can be reduced while substantially maintaining the combustion efficiency. O le Related Prior Art Combustion engines are with a power generation equipment (steam, gas, and diesel), in heating appliances, among others. Conventional engines, however, emit large amounts of carbon dioxide and other pollutants, which are increasingly unacceptable due to the associated adverse environmental and health effects. These pollutants can be reduced or eliminated by several methods, including those of advanced combustion technologies. Some of these technologies include homogeneous or staged combustion (HC and SC), respectively, where fuel-air mixtures are compressed and auto-ignited inside the cylinder. Another technology is the lean-burn (LB) combustion, that consists of operating the engine with an air-fuel mixture that is outside of the stoichiometric mixture, which results in a much lower combustion temperature, thus in a much lower creation of pollutants. All these technologies can be combined with the use of after-treatment systems in order to clean the exhaust stream. In general, however, these systems tend to be complex, prone to malfunctions, and/or relatively expensive. The known combustion technologies thus suffer from one or more deficiencies. Therefore, it
